ANODIZE FINISHES

Anodize finishing is the process of electrochemically accelerating and controlling the oxidation of an aluminum substrate, creating an extremely hard, durable, and aesthetically pleasing coating on the aluminum. Anodized aluminum is colorfast and mar resistant.

CARE & CLEANING

An anodize finish should be cleaned using a mild soap solution, applied with a soft cloth or sponge to retain its original beauty. To avoid damage, do not use acidic or alkaline cleaners.

Actual color may vary from sample shown, ask for color sample before ordering.
